**Referred by:** RABIN, NEIL

**Background**

1. Turbinate surgery 10 years ago
2. Multiple myeloma, BM transplant
3. Immunosuppressed and hypogammaglobulinaemic, on monthly IVIG and weekly G-CSF

Presentation: Recurrent mild sinusitis

I reviewed you in clinic today. Your symptoms have been really well-controlled. This time last year I had advised a prolonged course of clarithromycin to treat your symptoms with sinusitis.

On examination flexible nasal endoscopy you had no evidence of mucopus or nasal polyps.

I have advised you to continue to use fluticasone propionate nasal drops and saline rinses.

If there is a infective exacerbation of your sinusitis you would benefit from a prolonged course of clarithromycin 500 mg OD for 2 weeks followed by 250 mg OD for 6 weeks.

I will make a further appointment for you in 6 to 9 months time

Yours sincerely,  
Annakan Navaratnam FRCS (ORL-HNS)  
Consultant Rhinologist, Facial Plastic & ENT Surgeon
